REILLY CENTER REPORTS

Do you want a high-impact way of getting the results and implications of your research to thought leaders and policy makers? The Reilly Center wants to help by offering scholars a venue through which to reach these audiences: The Reilly Center Reports.

Each volume of the Reports will address urgent and emerging issues in the ethics and policy of science, technology, engineering, and medicine (STEM). The goal of the reports is to provide a basis for STEM reporting or a background to related policy decisions and discussions.

The publication is aimed at journalists and other members of the general and science media, policymakers, educators, and other thought leaders. Faculty and research specialists will author the articles, which will blend a timely critique of current literature with recommendations for future thought and action. The Reilly Center Reports does not seek to publish original research, but rather an informed perspective on academic work that could influence science policy.

The next issue of the Reilly Center Reports will come out in conjunction with the Reilly Center's new, annual list of the top ten emerging ethical dilemmas and policy issues in science and technology.

CALL FOR PAPERS

The editorial board of the Reilly Center Reports is currently soliciting abstracts for its biannual publication. We are seeking scholars to write short (approx. five page) articles that highlight timely issues and dilemmas in their fields of expertise. Articles should be written in non-technical language and be appropriate for direct quotation by journalists and other thought leaders.

Articles submitted to the Reilly Center Reports should:
- Be user-friendly and written in non-technical language.
- Include a list of (at least 3) highlights, or take-away messages.
- Include a list of (at least 5) resources for further reading.

The editorial team is available to provide feedback to authors during the writing process.

The editors will consider producing a special issue on one topic. If you are interested in submitting a proposal, please contact us with the topic, a list of proposed collaborators, and a short proposal.

See our website at reilly.nd.edu/about/publications/reports/ for more details.
